

Review of Basic Meteorology: General Circulation and Dynamics of the troposphere and stratosphere

Mark P. Baldwin (Northwest Research Associates, Bellevue, WA; ph. 425-644-9660 x323; fax 425-644-8422; e-mail: mark@nwra.com)

This talk will cover the basics of meteorology, beginning with solar heating and the effects of Earth's rotation. The large-scale circulation will be discussed, including waves, vertical motion, and mixing/dispersion of aerosols. The circulations of the stratosphere and troposphere will be contrasted and the circulation of the stratosphere will be discussed in more detail.
