Education

Postdoctoral Fellow, Massachusetts Institute of Technology, 2000-2004, (Sallie W. Chisholm, advisor)
Ph.D. (Botany) Duke University, 2000 (Richard T. Barber, advisor)
Title: *Regulation of Marine Photosynthetic Efficiency by Photosystem II*
B.S. (Civil and Environmental Engineering) Massachusetts Institute of Technology, 1994

Professional History

2017- Associate Professor, Duke University
2012-2017 Arthur P. Kaupe Assistant Professor of Molecular Biology, Duke University
2009-2017 Assistant Professor, Duke University, Division of Marine Science & Conservation
2007-2011 Scientific Consultant, PhycoSciences LLC
2005-2009 Assistant Professor, University of Hawaii Department of Oceanography
1997 Visiting Scientist, Fall Semester, Brookhaven National Labs (P. Falkowski Lab)

Awards / Honors

Algae Biomass Organization – Mid Career Excellence Award
Association for the Advancement of Limnology and Oceanography (ASLO) – Sustaining Fellow
Duke Science Communication Fellow
Alexander von Humboldt Research Fellow (Germany)
Arthur P. Kaupe Assistant Professor of Molecular Biology
German-American Kavli Fellow, National Academy of Sciences
NOAA Postdoctoral Fellowship in Climate and Global Change
Dissertations Initiative for the Advancement of Limnology and Oceanography
Harvey W. Smith Fellowship in Biological Oceanography

Professional Societies

American Geophysical Union (AGU), Association for the Sciences of Limnology and Oceanography (ASLO), Phycological Society of America (PSA), American Society of Microbiology (ASM), The Oceanography Society (TOS)

Research Interests

My group broadly studies the abundance, diversity and activity of marine microbes. We are biological (microbial) oceanographers, marine molecular ecologists, marine microbiologists, phycologists, and biogeochemists. Our environmental research, which is at the intersection of marine ecology and biogeochemistry, focuses on the marine cyanobacteria *Prochlorococcus*, the most abundant phytoplankton in the open oceans and an excellent model marine microbe. We also have substantial efforts in the biotechnological application of marine microalgae for aquaculture towards the sustainable production of feed, food and fuel to accelerate carbon emission reductions or carbon negative technologies.
